There has been a gentle hum of hard work at Brooke Priory this week. Routines and expectations are well embedded and the children are focussed on doing their best. It was lovely for our teachers to share successes with you at parents evenings, it's important we all build on this positive start and press on to continue the improvements that our children are making.

Nursery & Pre-School

The children have enjoyed learning all about nocturnal animals and their habitats this week. Making masks and using torches in our 'dark den' has been a highlight. We were also very lucky to see some footage from a child's garden wildlife camera, watching the animals in action whilst we sleep.

Kindergarten

Kindergarten have started Geography and are really excited about it! They go with Barnaby Bear and visit lots of lovely places. So far they have "visited" India and the UK (London), made flags and sent a postcard! Next we are going off to Spain - Olé!

Form I

Form I have made a bird's eye view of the school in Geography this week. What a super job they have made of it!

Form II

Form II have been learning all about verbs! They acted out all the ACTIONS that Traction Man performed in order to 'Save the Day'!

Form III

Form III have produced some fantastic writing about 'If I had Wings'. They used imaginative adjectives (including similes) to think about what they could gaze at, what they could breathe deeply and smell. Some amazing ideas included "fluffy clouds that felt like sheep wool" and "colourful butterflies fluttering on the breeze." Come and have a read on our classroom windows!

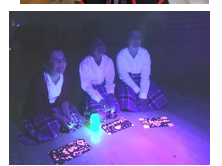

Form IV

Have you ever tried origami? Have you ever tried origami with no pictures and limited instructions?! Year IV did this week as an introduction to our instruction writing topic. Eventually, we managed to make star boxes!

Form V

As we come to the end of our explanation text topic in English, we have designed our own contraptions and have embedded the key features, ahead of our write up next week. There has been outstanding efforts made by all during the house cross-country competition, the engineering projects and debating techniques are taking place in our enrichment sessions and we have explored the scientific theories behind luminescence in science.

Form VI

Form VI have continued their work on fractions this week in their maths lessons. We've been ordering and comparing using practical equipment such as the Cuisenaire rods as well as simplifying and finding equivalent fractions.
